Profile

Frontend Developer with more than 10 years of experience in digital product environments, including several years of hands-on frontend development and technical product work.

I build modern frontend solutions using React and TypeScript, with a focus on clear architecture, structured state management, and maintainable code.

My background in development, teaching, and product work gives me a strong understanding of how technology, user experience, and business intersect. I thrive in cross-functional teams, contribute actively to technical discussions, and communicate complex topics clearly.

I take an analytical approach and prioritise solutions that reduce unnecessary complexity and create long-term value.

Erhvervserfaring

Frontend Developer (Freelance)

lilu digital | 2024 – present

- Develop modern web applications using React, TypeScript, and Astro, with a focus on clear architecture and maintainable code.
- Work systematically with server state using TanStack Query, including API integration, caching strategies, and robust error handling.
- Build component-based solutions with Astro, Tailwind, and typed content models in Sanity, with an emphasis on performance.
- Lead client projects from initial concept to implementation, advising on technology choices through clear and structured communication.
- Use AI-assisted development tools such as GitHub Copilot and OpenCode as an integrated part of my workflow.

Selected projects

- Spell Tracker Application (React, TypeScript, Tanstack Query, Tailwind CSS, shadcn) github.com/louissse/PocketSpells
- Website for musician (Astro, Sanity CMS, Tailwind CSS) mettelethan.com/
- Website for NGO Station (Webflow) www.station.dk/

IT Project Manager & Product Owner

FOA | 2023 – 2024

- Prioritised features and made product decisions in close collaboration with frontend, backend, and UX.
- Translated user insights into concrete technical requirements and user stories.
- Led the development of new features in collaboration with internal and external developers.
- Acted as Scrum Master and facilitated sprint planning and execution.

Skills

Technical stack

React • TypeScript • Astro • TanStack Query • Tailwind CSS • Git/GitHub • GitHub Copilot • OpenCode • .NET/C# • Sanity CMS

Selected Projects and Courses

Web Development – Backend

Diploma course in .NET backend development. **Project**: survey app with feedback , 2018

View on GitHub

Digitalisation in Practice, ITU

Course on business, organisational change, and human behaviour, 2021

Leading Digital Transformation, DTU

Diploma course in digitalisation and digital transformation, with a focus on leadership, business needs, and change management, 2021

Professional Experience – Continued

IT Project Manager & Team Lead

NEXT Uddannelse København | 2020 – 2023

- Led technical collaboration on a new administrative and learning platform in partnership with KMD.
- Acted as the link between users and the development team, translating needs into technical requirements.
- Ensured alignment between the solution's functionality and actual user needs.
- Introduced Shape Up as a new agile methodology to strengthen team focus, collaboration, and prioritisation.

Teacher of Programming & Physics

Københavns Mediegymnasium | 2016 – 2021

- Communicated complex concepts in an accessible and engaging way to a creative audience.
- Taught programming and technical problem-solving at upper secondary level using JavaScript, p5.js, and ml5.js.
- Developed teaching programmes that connected coding, structure, and analytical thinking.

Frontend Developer

Netcompany (TDC Erhverv) | 2015 – 2016

- Developed reusable frontend components in a Scrum team for a self-service solution for business customers (React, .NET, Bootstrap, Sitecore).
- Progressed from maintaining existing components to owning a new functional area, building more complex components and managing state.
- Worked with state lifting and component architecture to handle increasing complexity in new features.
- Defined data requirements and collaborated with a backend team (Poland) to adapt the .NET API.
- Contributed to code reviews and onboarding of new developers.

Selected Achievements

- Developed and launched a React-based Spell Tracker app using TanStack Query, caching, and structured state management, taking it from a concrete user problem to a published solution tested by active users. (Freelance)
- Took ownership of a distinct area within a larger React application, developing complex components in close collaboration with the backend team (Netcompany).
- Delivered high-performance websites using Astro, and deliberately chose Webflow when it was the right fit for the client rather than defaulting to custom code. (Freelance)
- Took over project management and Product Owner responsibilities for a mobile app (v2.0) and web platform, ensuring on-time delivery through clear prioritisation across business needs, user needs, and technical constraints (FOA).
- Introduced a Shape Up–inspired way of working, creating longer focus cycles and more stable delivery in a team with frequent shifting priorities (NEXT).

Education

MSc in Physics

University of Copenhagen, 2015

Strong analytical foundation
Trained to solve complex problems systematically, from quantum mechanics to code.

Computational skills
Experience with advanced data processing, algorithms, and mathematical modelling.

Comfortable with complex domains
Used to working with high levels of complexity and abstraction, both in physics and software.
