Profile

Frontend Developer with over 10 years of experience in digital product environments and several years of hands-on frontend development and product-oriented technical work.

I build modern frontend solutions using React and TypeScript, with a focus on clear architecture, structured state management, and maintainable code.

My background in both frontend development and product work gives me a strong understanding of how technology, user experience, and business intersect. I thrive in cross-functional teams, contribute actively to technical discussions, and communicate complex topics clearly.

Erhvervserfaring

Frontend Developer (Freelance)

lilu digital | 2024 – present

- Develop web applications in React, TypeScript, and Astro with a focus on scalable architecture and maintainable code.
- Work with server state using TanStack Query, including caching strategies for stable and performant data handling.
- Lead and deliver client projects from idea to implementation, advising on technology choices based on business needs.
- Developed websites in Astro and Webflow for small businesses and an NGO, improving SEO and enabling maintenance without developer dependency.
- Developed and launched a React-based Spell Tracker app (beta on Vercel), improving in-game overview and implementing caching strategies to ensure responsive data handling despite API limitations.

Projects: https://lilu.dev/

IT Project Manager & Product Owner

FOA | 2023 – 2024

- Prioritized features and contributed to product decisions in close collaboration with frontend, backend, and UX.
- Took ownership of project management and Product Owner responsibilities for mobile app v2.0 and the web platform, ensuring timely delivery despite limited resources.
- Translated user insights into clear technical requirements and user stories across multiple interconnected platforms.
- Acted as Scrum Master and supported team progress through structured sprint planning and coordination with internal and external developers.

Skills

Technical stack

React • TypeScript • Astro • TanStack Query • Tailwind CSS • Git/GitHub • GitHub Copilot • OpenCode • .NET/C# • Sanity CMS

Selected Projects and Courses

Web Development – Backend

Diploma course in .NET backend development. **Project**: survey app with feedback , 2018

View on GitHub

Digitalisation in Practice, ITU

Course on business, organisational change, and human behaviour, 2021

Leading Digital Transformation, DTU

Diploma course in digitalisation and digital transformation, with a focus on leadership, business needs, and change management, 2021

Professional Experience – Continued

IT Project Manager & Team Lead

NEXT Uddannelse København | 2020 – 2023

- Led technical collaboration on the development of a new administrative and learning platform, working closely with developers to ensure feasible and well-structured solutions.
- Acted as the link between users and the development team, translating needs into clear technical requirements with a focus on usability and implementation.
- Ensured alignment between user needs and system functionality across the platform.
- Introduced a Shape Up-inspired workflow in a team of 5, reducing context switching, improving focus, and enabling more stable deliveries and clearer visibility of team impact.

Teacher of Programming & Physics

Københavns Mediegymnasium | 2016 – 2021

- Communicated complex technical concepts in an accessible way to a creative audience, making programming approachable for students without a technical background.
- Taught JavaScript, p5.js, and ml5.js with a focus on problem-solving and hands-on application.
- Developed course materials that strengthened students' ability to work with code in a structured and analytical way.

Frontend Developer

Netcompany (TDC Erhverv) | 2015 – 2016

- Developed reusable frontend components in a Scrum team for TDC Business' self-service platform (React, .NET, Bootstrap, Sitecore).
- Took ownership of a new functional area, building complex React components with advanced state management.
- Defined data requirements and API contracts in close collaboration with a backend team (Poland), ensuring stable integration.
- Worked with component architecture and state lifting to manage increasing complexity in new features.
- Contributed to code reviews and onboarding of new developers.

Education

MSc in Physics

University of Copenhagen, 2015

Strong analytical foundation
Trained to solve complex problems systematically, from quantum mechanics to code.

Computational skills
Experience with advanced data processing, algorithms, and mathematical modelling.

Comfortable with complex domains
Used to working with high levels of complexity and abstraction, both in physics and software.
